VOLUME 21 1988

SUBJECT INDEX

Acetylcholine release, 575
  adenosine receptors
  cholinergic transmission
  muscarinic receptors
ACTH, 557
  rabbits
  thermoregulation
Acute/subacute administration comparisons, 21
  bicuculline
  dopamine receptors
  hippocampus
  muscarinic receptors
  striatal region
Adenosine receptors
  acetylcholine release, 575
  caffeine, chronic, 479
  cholinergic transmission, 575
  muscarinic receptors, 575
Adrenal medulla, 451
  catecholamine release
  cellular plasticity
α-Adrenergic receptor binding, 893
  β-adrenergic receptor binding
  heart development
  postnatal nutrition
β-Adrenergic receptor binding, 893
  α-adrenergic receptor binding
  heart development
  postnatal nutrition
Adrenocorticotropin, 163
  cerebrospinal fluid
  hypophysectomy
  push-pull cannulation
Afferent fibers, 701
  anterograde tracing
  immunochemistry
  pelvic viscera
  reproductive system
Afferent projections, 147
  dorsal thalamus
  midline nuclei
  retrograde lectin transport
Aging effects, 947
  gender effects
  nonopioid response
  opioid response
  pain inhibition
Alcohol, 765
  exploration
  flumazenil
  ZK 93426
Alzheimer fibroblasts, 825
  ATPase activity
  human brain tissue
  kinetic properties
Alzheimer's disease, 13
  basal forebrain
  cholinergic marker
  lesions, basal forebrain
  neocortex
  noradrenergic marker
  serotonergic marker
Alpha-adrenoceptors, 329
  estradiol
  mestranol
Ambivalence, 61
  behavioral correlates
  flight
  intracranial stimulation
  self-stimulation
Amino acid deficits, 637
  amygdala
  prepiriform cortex
  tryptophan
Amino acid release, 343
  mossy fiber expansions
  synaptosome isolation
γ-Aminobutyric acid
  γ-aminobutyric acid-transaminase, 623
  gustatory zone, 623
  hypothalamic gonadotropin-releasing hormone, 677
  nucleus of the solitary tract, 623
γ-Aminobutyric acid receptors, 251
  benzodiazepine receptors
  cerebellum
  mice, young/old comparisons
γ-Aminobutyric acid-transaminase, 623
  γ-aminobutyric acid
  gustatory zone
  nucleus of the solitary tract
d-Amphetamine, 133
  axonal degeneration
  continuous administration
  dopamine
  neostriatum
  tyrosine hydroxylase immunoreactive patches
Amphibians, 959
  analgesia
  antinociception
  opioid systems
Amygdala
  amino acid deficits, 637
  commissural interneurons, 123
  hippocampus, 373
  lesions, electrolytic, 123
  masticatory motoneurons, 123
  prepiriform cortex, 637
  trigeminal motor nucleus, 123
  tryptophan, 637
  video microscopy, 373
Amygdaloid pathway, 829
  pontine reticular formation
  trigeminal motor nucleus
Analgesia
  amphibians, 959
  antidepressants, 887
  antinociception, 959
  body-rotation, 967
  $5HT_2$ receptors, 887
  mice, male, 967
  opiates, 887
  opioid systems, 959
  serotonin, 887
Analgesic systems, 933
  hormonal components
  neural components
  nociception development
  opioid components
Angiotensin receptors, 731
  peptidase inhibitors
  pressor responses
Animal model, 483
  anxiety, chronic
  benzodiazepine receptors
  perinatal diazepam
Anisomycin, 581
  hamsters
  sexual receptivity
Anterograde tracing
  afferent fibers, 701
  immunochemistry, 701
  lesions, combined entorhinal-raphe, 285
  lesions, lateral entorhinal, 285
  pelvic viscera, 701
  reproductive system, 701
  septo-hippocampal projections, 285
Antidepressants, 887
  analgesia
  $5HT_2$ receptors
  opiates
  serotonin
Antinociception, 959
  amphibians
  analgesia
  opioid systems
Anxiety, chronic, 483
  animal model
  benzodiazepine receptors
  perinatal diazepam
Apparatus
  lip clip, 139
  low pass filter, 335
  Morris water task, 499
  radial arm maze, 483
Arachidonic acid, 445
  cerebellar glomeruli
  phospholipids
Arcuate neuron response, 31
  electroacupuncture-analgesia
Arcuate nucleus, 757
  lesions, hypothalamus
  pain
Area SmII, 207
  claustrum
  intracortical connections
  raccoon

retrograde HRP tracer method
SmI
Arterial blood pressure changes, 191
in vivo electrochemistry
locus coeruleus
neurotransmitter metabolism
ATPase activity, 825
Alzheimer fibroblasts
human brain tissue
kinetic properties
ATP secretion, 459
ecto-protein kinase
protein phosphorylation
striatal neurons
Automated sleep scoring, 843
cats
electroencephalogram collection
Autoradiography, 693
gerbils
second-messenger systems
Axonal degeneration, 133
d-amphetamine
continuous administration
dopamine
neostriatum
tyrosine hydroxylase immunoreactive patches
Axon terminals, 795
hypoglossal afferents
synaptology

Basal forebrain
Alzheimer's disease, 13
cholinergic marker, 13
cholinergic projection system, 563
ethanol intake, 563
interpeduncular nucleus, 643
lesions, basal forebrain, 13
neocortex, 13
neuronal loss, 563
noradrenergic marker, 13
phaseolus vulgaris-leucoagglutinin, 643
serotonergic marker, 13
Barbiturate anesthesia, 835
dopamine antagonism
drug interaction
BAY K 8644, 865
behaviors
calcium channel activation
tolerance
Behavior, 491
central nervous system
clenbuterol
beta adrenergic receptors
Behavioral adaptation, 955
stress induced analgesia
survival
Behavioral correlates, 61
ambivalence
flight
intracranial stimulation
self-stimulation
Behaviors, 865
BAY K 8644
calcium channel activation
tolerance
Benzodiazepine receptors
γ-aminobutyric acid receptors, 251
animal model, 483
anxiety, chronic, 483
cerebellum, 251
mice, young/old comparisons, 251
perinatal diazepam, 483
Beta adrenergic receptors
behavior, 491
central nervous system, 491
clenbuterol, 491
6-hydroxydopamine treatment, 591
Bicuculline, 21
acute/subacute administration comparisons
dopamine receptors
hippocampus
muscarinic receptors
striatal region
Binding sites, 129
brain slices
muscarinic receptors
opioid receptors
sodium channel toxins
[^{125}I]4IQNB binding sites, 181
heterogeneity
mollusc
muscarinic receptors
Biochemistry, 37
caudal neurosecretory complex
histofluorescence
immunohistochemistry
monoamines
Blood-brain barrier, 881
iron
transferrin
B9 cell group, 325
median raphe nucleus
Body-rotation, 967
analgesia
mice, male
Body weight, 571
dopaminergic systems
hyperphagia
lesions, ventromedial hypothalamus
Body weight regulation, 805
brown adipose tissue
lesions, lateral hypothalamic
lesions, medial hypothalamic
thermogenesis
Brain
accumbens nucleus, 693
amygdala, 123, 373, 637, 829
anterior hypothalamus, 147
anterior pituitary, 7
archistriatum, 637
arcuate hypothalamus nucleus, 147
arcuate nucleus, 757
area SmII, 207
basal forebrain, 13, 563, 643
basal nucleus of Meynert, 465
bed nucleus of the stria terminalis, 147
B9 cell group, 325
brainstem nucleus parvocellularis, 547
caudal parabrachial nucleus, 79
central grey, 147
cerebellar vermis, 245
cerebellum, 251, 479, 491, 591, 693, 737
cerebral cortex, 13, 479, 491, 591, 737
claustrum, 207
cortex, 385
dentate gyrus, 47, 285
dorsal parabrachial nucleus, 147
dorsal pons, 61
dorsal raphe, 325, 671
dorsal tegmentum, 61
dorsal thalamus, 147
frontal cortex, 329
globus pallidus, 591, 643, 855
hippocampus, 13, 21, 47, 201, 233, 285, 343, 363, 373, 499, 587, 601, 693, 741
hypoglossal nucleus, 305
hypothalamus, 7, 31, 129, 225, 233, 557, 581, 677, 757, 897
intermediate gray area, 105
ipsilateral cortex, 13
lateral entorhinal cortex, 285
lateral funiculus, 105
lateral hypothalamus, 61, 147, 239, 319, 873
laterodorsal tegmental nucleus, 147
locus coeruleus, 61, 191, 329, 395, 401, 425, 465
medial preoptic area, 147, 215
median raphe nucleus, 325
mediodorsal thalamus, 723
medio-frontal cortex, 61
medulla, 651, 749, 839
medullary reticular formation, 313, 795
midbrain, 737
neocortex, 13, 601, 813
neurointermediate lobe of the pituitary, 7
nucleus accumbens, 43, 147
nucleus tractus solitarius, 147, 329, 623
olfactory tubercle, 693
parafascicularis thalamus, 671
paramedian reticular nucleus, 651
parasagittal thalamus, 723
paraventricular nucleus, 25, 587, 905
parietal area 7a, 505
perirhinal cortex, 147
periventricular hypothalamus nucleus, 147
pontine reticular formation, 829
posterior hypothalamus, 61
posterior hypothalamus nucleus, 147
posterior mesencephalic reticular formation, 61
precruciate cortex, 385
prefrontal cortex, 723
preoptic area, 581, 643
prepiriform cortex, 637
raphe, 61, 147
reticular formation, 587
reticularis pontis caudalis, 61
septum, 147, 643
sexually dimorphic nucleus, 215
SmI cortex, 207
somatosensory cortex, 233
spinal lemniscus, 433
stalk-median eminence, 117
stratum lacunosum-moleculare of the cornu ammonis, 285
striatal region, 21
striatum, 233, 257, 295, 473, 479, 591, 601, 693
substantia innominata, 643
substantia nigra, 257, 591, 693, 855
substantia nigra reticulata, 313
supramammillary hypothalamus, 147
supraoptic nucleus, 685
supratrigeminal region, 123
thalamus, 433
trigeminal motor nucleus, 123, 829
vagal nucleus, 839
ventral funiculus, 105
ventral horn, 105

ventral mesencephalic tegmentum, 325
ventral mesencephalon, 581
ventral pallidum, 643
ventral parabrachial nucleus, 147
ventral posterior thalamus, 433
ventral subiculum, 147
ventral tegmentum, 319
ventromedial hypothalamus, 25, 147, 239
ventromedial mesencephalic tegmentum, 659
ventromedial mesencephalon, 61
zona incerta, 147
Brain development, 737
DNA synthesis
isoproterenol
Brain reward sites, 319
dopamine release
electrical stimulation
in vivo electrochemistry
lateral hypothalamus
mesencephalic dopamine neurons
ventral tegmentum
Brain slices, 129
binding sites
muscarinic receptors
opioid receptors
sodium channel toxins
Brain spectrin isoforms, 607
mammals
neural tissue
Brainstem nucleus parvocellularis, 547
lesions, electrolytic
salivary secretion
salivatory neurons
Brown adipose tissue, 805
body weight regulation
lesions, lateral hypothalamic
lesions, medial hypothalamic
thermogenesis

Caffeine, chronic, 479
adenosine receptors
Calcium, 363
long-term potentiation
memory
N-methyl-D-aspartate receptors
Calcium channel activation, 865
BAY K 8644
behaviors
tolerance
Calcium-induced long-term potentiation, 201
calmodulin
hippocampus
long-term potentiation
tetanic-induced long-term potentiation
Calcium ion levels, 353
digital imaging
Purkinje neurons
Calmodulin, 201
calcium-induced long-term potentiation
hippocampus
long-term potentiation
tetanic-induced long-term potentiation
Cardiac action potentials, 55
computer simulations
two-dimensional calculations
Castration, 7
β-endorphin levels
immobilization stress
testosterone
Catecholamine innervation, 305
hypoglossal nucleus
immunocytochemistry
Catecholamine release
adrenal medulla, 451
cellular plasticity, 451
dopamine, 473
striatum, 473
tyrosine, 473
Cats
automated sleep scoring, 843
cortex, 385
electroencephalogram collection, 843
neurons, electrical properties, 385
Caudal neurosecretory complex, 37
biochemistry
histofluorescence
immunohistochemistry
monoamines
Caudal parabrachial nucleus, 79
dendritic architecture
gustatory system
neuronal morphology
postnatal development
Cellular mechanisms, 513
learning
presynaptic facilitation
Cellular plasticity, 451
adrenal medulla
catecholamine release
Central nervous system, 491
behavior
beta adrenergic receptors
clenbuterol
Cerebellar glomeruli, 445
arachidonic acid
phospholipids
Cerebellar vermis, 245
guinea pig
in vitro
neuronal excitation
noradrenaline
Cerebellum, 251
γ-aminobutyric acid receptors
benzodiazepine receptors
mice, young/old comparisons
Cerebrospinal fluid, 163
adrenocorticotropin
hypophysectomy
push-pull cannulation
Chaos
connectionist networks, 529
mollusc, 539
neurons, 529, 539

Cleavage planes, 601
hippocampus
microspheres
passive displacement
Clenbuterol, 491
behavior
beta adrenergic receptors
central nervous system
Cocaine, 233
dopamine
monoamine depletion
neurotoxicity
serotonin
Cochlea, 1
ganglion spirale
guinea pig
ornithine decarboxylase
Commissural interneurons, 123
amygdala
lesions, electrolytic
masticatory motoneurons
trigeminal motor nucleus
Computer hardware, 851
computer software
signal averaging system
Computer simulations, 55
cardiac action potentials
two-dimensional calculations
Computer software, 851
computer hardware
signal averaging system
Connectionist networks, 529
chaos
neurons
Continuous administration, 133
d-amphetamine
axonal degeneration
dopamine
neostriatum
tyrosine hydroxylase immunoreactive patches
Cortex, 385
cats
neurons, electrical properties
Corticosterone release, 905
epinephrine
feeding behavior
glucose release
neuropeptide Y
norepinephrine

paraventricular nucleus
vasopressin release
Corticosterone secretion, 587
limbic stimulation
norepinephrine
Cyclic AMP, 439
GABA receptors

Degeneration, 257
MPTP
nigrostriatal dopamine systems
Dendritic architecture, 79
caudal parabrachial nucleus
gustatory system
neuronal morphology
postnatal development
Dentate gyrus, 47
ethanol
hippocampus
prenatal exposure
synaptogenesis
Dextrose-saccharin cocktail, 963
morphine analgesia
tolerance
Diestrus 2, 277
estradiol
naxolone
ovariectomy
proestrous
pulsatile luteinizing hormone
Digital imaging, 353
Ca ion levels
Purkinje neurons
Diisopropylfluorophosphate, 499
heterosis
spatial learning
strain differences
DNA synthesis, 737
brain development
isoproterenol
Dog brain tissue, 785
endothelial cell
human brain tissue
microvessels
Dopamine
d-amphetamine, 133
axonal degeneration, 133
catecholamine release, 473
cocaine, 233
continuous administration, 133
neurotoxicity, 233
neostriatum, 133
monoamine depletion, 233
serotonin, 233
striatum, 473
tyrosine, 473
tyrosine hydroxylase immunoreactive patches, 133
Dopamine-acetylcholine interaction, 295
immunocytochemistry, dual-labeling
striatum
Dopamine antagonism, 835
barbiturate anesthesia
drug interaction
Dopamine receptors, 21
acute/subacute administration comparisons
bicuculline
hippocampus
muscarinic receptors
striatal region
Dopamine release, 319
brain reward sites
electrical stimulation
in vivo electrochemistry
lateral hypothalamus
mesencephalic dopamine neurons
ventral tegmentum
Dopaminergic systems, 571
body weight
hyperphagia
lesions, ventromedial hypothalamus
Dorsal raphe stimulation, 671
electrostimulation, external
pain modulation
thalamic neurons
Dorsal root ganglia, 105
somatostatin
spinal cord
Dorsal thalamus, 147
afferent projections
midline nuclei
retrograde lectin transport
Dorsal vagal complex, 913
glutamate binding
nodose ganglionectomy
Drug
acetylcholine, 395, 451
alcohol, 765
alpha-methylparatyrosine, 191
4-aminobutylphosphonic acid, 439
γ-aminobutyric acid, 677
amitriptyline, 887

PEPTIDES

An International Journal

Editor-in-Chief: **Abba J. Kastin,**

Veterans Administration Medical Center and Tulane University School of Medicine, 1601 Perdido Street, New Orleans, LA 70146, USA

Peptides, small proteins with generally fewer than 100 amino acids, are present in a wide range of living systems from plants to humans. Appearing bimonthly, **PEPTIDES** is an international journal presenting original contributions on the chemistry, biochemistry, neurochemistry, endocrinology, gastroenterology, physiology, and pharmacology of peptides, as well as their neurological, psychological and behavioral effects. **PEPTIDES** emphasizes all aspects of peptide research and covers investigations of these proteins in plants, insects, lower vertebrates, animals and humans, including clinical studies. Some examples of topics which contributors have recently discussed include:

- the activity of atrial natriuretic peptide in the cardiovascular system
- the role of peptides in satiety and appetite suppression
- the action of peptides in the gastrointestinal tract
- the role of the brain peptides in both normal neurological function and in mental disorders.

In addition to original articles, **PEPTIDES** publishes brief communications and reviews of areas of current interest.

Abstracted in *Current Contents/Life Sciences, Science Citation Index, Excerpta Medica, BIOSIS Database, Current Awareness in Biological Sciences,* Index Medicus, MEDLINE, and MEDLARS, **PEPTIDES** is the leading source of information in this field. Place your subscription order today!

AIMS AND SCOPE

Brain Research Bulletin will publish original reports of new and significant information concerning all aspects of the nervous system: biochemistry, physiology, anatomy, ultrastructure, electrophysiology, neurology, pathology and behavior. Behavioral studies as such will not be published unless they are obviously pertinent and make a significant contribution to one of the other fields. Brief communications which describe a new method, technique or apparatus and results of experiments which can be reported briefly with limited figures and tables will be included. Accelerated publication will be available for original and high quality manuscripts not to exceed four printed pages in length. These will be published as Rapid Communications. A limited number of relevant reviews and theoretical articles, results of symposia, and more comprehensive studies as monograph supplements will also be published. In addition, announcements concerning neuroscience as a profession, meetings reports, and communications from scientific societies will be published. Articles will be published in English.

The accepted abbreviation for *Brain Research Bulletin* for bibliographic citation is *Brain Res Bull*

INSTRUCTIONS TO AUTHORS

All manuscripts should be sent to the Editor-in-Chief for review and processing.

STYLE OF MANUSCRIPT

General Form. (1) Manuscripts should be submitted in triplicate and should be typewritten, double spaced with wide margins on good quality paper. If a word processor is utilized to prepare the manuscript, a letter quality printer must be used and computer generated illustrations must be of the same quality as professional line drawings or they will not be accepted. (2) The title page should contain: title of paper; author(s); laboratory or institution of origin with city, state, zip code, and country; complete address for mailing proofs; a running head not to exceed 40 characters including spaces between words. (3) References, footnotes, and legends for illustrations should be typed on separate sheets, double spaced. (4) Illustrations (unmounted photographs) should be identified on the reverse with figure number and author(s) name; when necessary the top should be clearly marked. (5) Each table should be typed on a separate sheet and double spaced. (6) All dimensions and measurements must be specified in the metric system. Standard nomenclature, abbreviations and symbols, as specified by Royal Society Conference of Editors. Metrication in Scientific Journals, Am. Scient. 56:159–164; 1968, should be used throughout. (7) Italics should not be used for the purpose of emphasis.

Title. The title should not be longer than 85 characters, including spaces between words.

Length of Paper. The Editors insist upon clear, concise statement of facts and conclusions. Fragmentation of material into numerous short reports is discouraged.

Abstract. Each paper submitted must be accompanied by an abstract, which does not exceed 170 words and must be suitable for use by abstracting journals. Abstracts should be prepared as follows:

MYERS, R. D., C. MELCHIOR AND C. GISOLFI. *Feeding and body temperature: Changes produced by excess calcium ions* . . .BRAIN RES BULL. Marked differences in extent of diffusion have been . . .

A list of from 3–12 (or more) words or short phrases suitable for indexing terms should be typed at the bottom of the abstract page accompanying the manuscript. These terms will be printed with the paper at the end of the abstract.

Drugs. Proprietary (trademarked) names should be capitalized. The chemical name should precede the trade, popular name, or abbreviation of a drug the first time it occurs.

Footnotes. Title page footnotes should be numbered consecutively. If senior author is not to receive reprint requests, a footnote should be given to designate to whom requests should be sent. Text footnotes should not be used; the material should be incorporated into the text. Table footnotes: see *Tables* (b).

References. Literature cited should be prepared according to the Numbered/Alphabetized style of the Council of Biology Editors. References should be cited by number, in parentheses, within the text (only one reference to a number) and listed in alphabetical order (double spaced) on a separate sheet at the end of the manuscript. *Do not recite names of authors within the text.* Journal citations in the reference list should contain the following: (a) surnames and initials of all authors (surname precedes initials); (b) title of article; (c) journal title abbreviated as listed in the *List of Journals Indexed in Index Medicus;* (d) volume, inclusive pages, and year. Example:

1. Banks, W. A.; Kastin, A. J. Peptides and the blood-brain barrier: Lipophilicity as a predictor of permeability. Brain Res. Bull. 15:287–292; 1985.

Book references should be in the following order: author, title, city of publication, publisher, year, and pages. Examples:

1. Mello, N. K. Behavioral studies of alcoholism. In: Kissin, B.; Begleiter, H., eds. The biology of alcoholism. vol. 2. Physiology and behavior. New York: Plenum Press; 1972:219–291.

2. Myers, R. D. Handbook of drug and chemical stimulation of the brain. New York: Van Nostrand Reinhold Company; 1974.

Personal Computers: Authors with access to an Apple IIc, IIe, IBM-PC or compatible personal computer can use Manuscript Manager CBE style, a software program available from Pergamon Press that automatically formats manuscripts according to CBE requirements for *Brain Research Bulletin*, select the CBE Numbered/Alphabetized citation/reference style option at the Printer Menu.

Illustrations. (a) Prepare for use in a single column width whenever possible. (b) All drawings for reduction to a given size should be drawn and lettered to the same scale. (c) All illustrations should be referred to as figures and numbered in Arabic numerals. (d) Lettering should be done in India ink or other suitable materials and must be proportionate to the size of the illustrations if it is to be legible after reduction. Lettering should be sized so that its smallest elements (subscripts or superscripts) will be readable when reduced. (e) When possible all lettering should be within the framework of the illustration; likewise the key to symbols should be on the face of the chart. The following standard symbols should be used as they are easily available to the printer: ○ ● △ ▲ □ ■ +. (f) Actual magnification of all photomicrographs should be given. Dimension scale should be indicated. (g) Sharply contrasting unmounted photographs of figures on glossy paper are required. (h) Illustrations should be submitted in black and white unless color reproduction is requested. Color prints should be submitted in actual size and authors will be responsible for the additional costs.

Tables. (a) Each table should have a brief heading; explanatory matter should be in footnotes, not as part of the title. (b) Table footnotes should be indicated in the body of the table in order of their appearance with the following symbols: * † ‡ § ¶ # **, etc. (c) Tables must not duplicate material in text or illustrations. (d) Vertical rules should be omitted. (e) Short or abbreviated column heads should be used. (f) Statistical measures of variation, SD, SE, etc., should be identified. (g) Analysis of Variance tables should not be submitted but significant F's should be incorporated where appropriate within the text. The appropriate form for reporting F value is: $F(11,20)=3.05$, $p<0.01$.

Formulas and Equations. Structural chemical formulas, process flow-diagrams, and complicated mathematical expressions should be kept to a minimum. Usually chemical formulas and flow-diagrams should be drawn in India ink for reproduction as line cuts.

All subscripts, superscripts, Greek letters, and unusual characters must be clearly identified.

Anesthesia. In describing surgical procedures on animals, the type and dosage of the anesthetic agent should be specified. Curarizing agents are not anesthetics; if these were used, evidence must be provided that anesthesia of suitable grade and duration was employed.

Proofs. Corrections to the proofs must be restricted to printer's errors only. Other than these, any other alterations will be charged to the author.

Reprints. Each author will receive with his galley proofs a reprint order form which must be completed and returned with the proofs. Late orders cannot be filled since reprints are run at the time the Journal is printed. Senior author receives 25 reprints free. Authors of papers which significantly exceed average size (six printed pages) are requested to purchase 200 reprints of their article.

Copyright. Publications are copyrighted for the protection of the authors and the publisher. A Transfer of Copyright Agreement will be sent to the author who submits the manuscript. The form must be completed and returned to the publisher before the article can be published.
